SUMMARY

Fourth-year Computer Engineering student at Yaşar University interested in software development, web technologies and artificial intelligence. Built production-style web applications with React, Vue.js, .NET 8, Django and PostgreSQL across three internships. Team-oriented, eager to learn and responsible.

EXPERIENCE

Volunteer Intern, Uniteks
August 2026 – September 2026 | UNIT-X Recruitment Management Platform

- Built a recruitment management platform from scratch with two separate interfaces: one for the HR team and one for job applicants.
- Modeled candidate data as structured records instead of PDF CVs, creating a candidate pool filterable by skills, experience and education.
- Developed the frontend with React and Tailwind CSS and the service layer with .NET 8 Web API, using Supabase (PostgreSQL) as the database.
- Migrated the project from a low-code platform to a custom-coded architecture.
- Designed the architecture of a matching system that scores candidate–job compatibility based on job criteria.

Intern, Kuika Software
June 2026 – August 2026 | Kuika Low-Code Applications

- Developed idea-sharing and HR management applications on the Kuika low-code platform.
- Built idea submission, like, comment and notification systems, plus survey management and profile pages.
- Wrote SQL queries and table joins against Kuika's KUser system.

Volunteer Intern, N2Mobil Takip Sistemleri A.Ş.
July 2025 – September 2025

- Designed and developed a web application with a user authentication system using Vue.js and Django REST API.
- Built the login screen and core user flows; gained hands-on experience in software development, problem solving and teamwork.
- Managed project code with Git and GitHub.

PROJECTS

- UniRide: Campus car-sharing platform built with React, Node.js and Express in a microservices architecture (team of 4, COMP 3304 term project).
- Poyraz Mobilya: Custom furniture company website with admin panel, project gallery and media uploads using Next.js 14, TypeScript, Tailwind CSS, MongoDB and JWT authentication.
- Todo App: Web app with login, profile, to-do, post and album management using Vue.js and Django REST API.

EDUCATION

Yaşar University – B.Sc. Computer Engineering
2022 – 2027 (expected) | 4th year

Yaşar University – Banking and Insurance
2025 – 2027 | 1st year

SKILLS

- Frontend: HTML, CSS, JavaScript, TypeScript, React, Next.js, Vue.js
- Styling: Tailwind CSS, Vuetify
- Backend: C# / .NET 8 Web API, Python, Django, REST API, Node.js, Express, C
- Databases: PostgreSQL, Supabase, MySQL, MongoDB, SQL
- Machine Learning: Python (NumPy, Pandas), Kaggle (beginner)
- AI-Assisted Development: Claude Code, Claude Design, Codex, Antigravity
- Tools: Git, GitHub, Kuika (low-code)

LANGUAGES

Turkish: Native | English: B2
